DETAILED ACTION

Information Disclosure Statement

1. VanSlyke et al (U.S. Patent 4,720,732) has already been considered and made of record (Paper No. 6, submitted on 14 May 2001).

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-4, 25, 26, 32, 33, 38-42 and 46-53 are rejected under 35 U.S.C. 102(b) as being anticipated by Berggren et al (journal article, "Organic Solid-State Lasers With Imprinted Gratings On Plastic Substrates").

Berggren et al (see the entire document, in particular, page 410, first column and Figure 1) teach a process of making a device (e.g., an organic LED device) including the steps of providing a substrate comprising a device layer on the surface of the substrate and patterning the device layer by pressing a mold (i.e., stamp) comprising a pattern against the substrate and device layer (as set forth in instant independent claim 2), and thereby directly patterning the device layer (as set forth in independent claim 1).

Art Unit: 1732

Allowable Subject Matter

4. Claims 54-61 are allowable over the prior art references presently of record.

5. The following is a statement of reasons for the indication of allowable subject matter: None of the prior art references presently of record, alone or in combination, disclose, suggest or teach a process of patterning a device layer in the fabrication of a device including the step of translating a substrate with a device layer thereon as a stamp is rotated to directly pattern the device layer as set forth in instant independent claim 54.
